

Facts to Know**Sequences**

A *sequence* is a set of numbers which follows a mathematical rule.

Sequences can be used with all four operations and with combinations of operations.

This is a simple sequence:

$$1, 2, 3, 4, 5, 6, 7, 8, \dots$$

Here is a multiplication sequence called the doubling sequence.

$$1, 2, 4, 8, 16, \dots$$

Some sequences use two operations like this one:

$$4, 9, 19, 39, 79, \dots$$

- The operations are multiply by 2 and add 1.
- The rule can be written this way: $(a \times 2) + 1$.

Multiplication sequences are also called geometric progressions.

Exponents

When a number is to be multiplied by itself, it can be written as an exponent.

The *exponent* is the small raised number which tells how many times to multiply the base number by itself.

Sample A

5^2 means multiply 5 times 5.

5 is the base number.

The raised number ² is the exponent. It also indicates that 5 is being raised to the second power.

Sample B

$$5^3 = 5 \times 5 \times 5$$

This indicates that 5 is to be multiplied by itself, and the answer (25) is to be multiplied again by 5.

$$5 \times 5 = 25$$

$$25 \times 5 = 125$$

$$5^3 = 125$$

Sample C

$$3^4 = 3 \times 3 \times 3 \times 3$$

This exponent (or the raised number) indicates that 3 is to be multiplied by 3.

The answer (9) is to be multiplied by 3 again.

The answer (27) is to be multiplied by 3 again.

$$3 \times 3 = 9$$

$$9 \times 3 = 27$$

$$27 \times 3 = 81$$

$$3^4 = 81$$

A **sequence** is a set of numbers which follows a mathematical rule.

A number multiplied by itself can be written as an exponent.

The **exponent** tells how many times to multiply the base number by itself.

5² is 5 squared or “5 to the second power.”

$$5^2 = 25$$

5³ is “5 cubed” or “5 to the third power.”

$$5^3 = 5 \times 5 \times 5$$

$$5 \times 5 = 25$$

$$25 \times 5 = 125$$

$$5^3 = 125$$
